Press Release

HK Audio unveils LUCAS NANO 602 portable PA at NAMM 2017

NAMM Show, Anaheim, California, USA / St. Wendel, Germany, January 19 2017.

HK Audio, the German sound reinforcement experts, have unveiled LUCAS NANO 602, the latest and most affordable member of their LUCAS NANO 600 series of professional, portable PA systems.

LUCAS NANO 602 is the ideal compact PA for any musician or DJ who prefers to use their own external mixer. Featuring one stereo input, it delivers the LUCAS NANO family's standard "professional sound to go", and can be set up for its optimized use as a 2.1 stereo system in seconds. It also combines easily and quickly with any other 600 series NANO to form a powerful Twin Stereo system where even more power is required.

Weighing in at just 16.3 kg/36 lbs, LUCAS NANO 602 can be transported in just one hand, with the satellites mounted inside the subwoofer. And despite its small size, it houses a number of groundbreaking HK Audio technologies. These include the **Multicell Transformer**, which delivers the quality performance of a large high-frequency horn at a fraction of the size, and **Anti-Resonance Bracing**, which ensures that the subwoofer uncompromisingly converts every single watt of power into pure low-end energy.

Rüdiger Forse, HK Audio's Senior Product Manager, said: "LUCAS NANO 602 continues the NANO family philosophy of offering an incredible sounding and versatile PA in an ultra-compact and lightweight format. It's so simple to use – setting it up is an absolute breeze! With its amazing sonic power, crystal-clear response and up to 130 dB SPL, LUCAS NANO 602 is the perfect way to bring your music to life for up to 200 people!"

Experience LUCAS NANO 602 in the flesh at the **HK Audio booth (Hall A #6440, KORG) at NAMM 2017**, and get the full lowdown on the official HK Audio website now:
